DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Groups 1-259, claim(s) 1, 2 and 5-12, drawn to a DNA fragment upstream of a gene described in the table, a method for regulating RNA production and a method for producing a protein. Note: Each group represents a single gene. Applicant must choose which gene is part of the invention. This is **not** a species election.

Group 260, claim(s) 3-12, drawn to a DNA fragment, a method for regulating RNA production and a method for producing a protein.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The claims lack unity of invention because Applicants' invention is not novel. Nakagawa et al (Biochem. and Biophys. Res. Comm. 291: 707-713, 2002) teach the fatty acid desaturase gene, OLE1, from *S. cerevisiae* that is inducible by low temperatures.

The special technical feature of Groups 1-259 is a promoter upstream of a *S. cerevisiae* gene, which is cold-inducible. Each promoter has a different sequence and is biochemically different from the others. Likewise, each gene has a different function

and is biochemically and structurally different from the others. The special technical feature of Group 260 is different from that of Groups 1-259 because the claims relate to a cold-inducible promoter from any organism with a specific sequence, but do not claim cold-inducible *S. cerevisiae* genes. Therefore the promoter of Group 260 has a different function than the promoters used in Groups 1-259.

Because of the reasons set forth above, the inventions have different technical features and are therefore patentably distinct.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
